

ABSTRACT OF THE DISCLOSURE

1
2 A fastening member includes a root portion, and a driven portion.
3 The root portion has a first end and a second end and has a mediate portion
4 formed with two elongated slots. The driven portion has an end extended from
5 the first end of the root portion so that the root portion is combined with the
6 driven portion to form a substantially L-shaped body. Thus, the fastening
7 member is combined with the workpieces rigidly and stably without
8 detachment, so that the workpieces are closely combined together.
